

As investors of stock, it is very important for us to know about climate related risks a company we are looking at has.

We are very concerned about the new weather the world is now experiencing and feel that our investments should not jeopardize our grandchildren and future generations.

Also, We feel very leery about investing in stocks with large climate risks because of the current world uneasy feeling about these stocks.

At this time it is very hard to get reliable information from companies to make decisions and so we strongly favor S7-10-22 to help us and others make good decisions with our money for us, our grandchildren, and the world.

Thank you

Pdon and Glenda Pinkham
